Words to know

Protection level

The percentage loss that Lincoln will absorb from a market downturn. If a market index drop is in excess of the protection level, there is the risk of loss of principal.

Performance cap

The most growth (or ceiling) you can earn for an indexed term. For annual lock accounts, it is the maximum percentage you can earn each year of the term.

Performance trigger rate

An amount that's credited to your account if the index change is positive or flat at the end of an indexed term.

Dual performance trigger

The dual performance trigger rate is credited to your account if the index change is up, flat, or down within the protection level at the end of a term. If the index change is down more than the protection level the dual performance trigger rate is used to offset loss, which may provide positive return.

Dual plus accounts

If the index change is up or flat you earn the greater of the dual rate or the index return up to the cap. If the index return is down, the dual rate is added to the index loss, which may provide a positive return.
